Sajeevan Veeriah

Robotics, Mechatronics, AI/ML & End-To-End Automation Engineer | Control Systems, Embedded Design & MES/SCADA Integration | Applied R&D

Geelong, VIC | Portfolio and contact form: sv.sajeevanveeriah.workers.dev

PROFILE

Mechatronics engineer (Honours, Distinction) building robotics, control and automation systems from first requirement to tested hardware and software. Currently IT/OT and Systems Engineer on Farm Frites Australia's greenfield potato-processing plant at Dooen, VIC, across SCADA, PLC interfaces, MES and commissioning. Previously integrated PLC logic, HMI/SCADA and drives in GMP manufacturing at JAG Process Solutions and validated vehicle software and ADAS at Ford. Robotics and mechatronics work includes a ROS 2 navigation rover, embedded sensing hardware and Voltwyn client electronics and firmware.

Core strengths: Robotics and autonomy | Mechatronics and embedded design | Control systems | Industrial automation and commissioning | MES/SCADA and IT/OT integration | Test and validation | Software, AI/ML and data

TECHNICAL SKILLS

Robotics and autonomy: ROS 2, Nav2, SLAM, EKF sensor fusion, localisation, planning, PID control, Gazebo, RViz, LiDAR and IMU integration, C++ and Python.
Mechatronics and embedded: ESP32/ESP32-S3, STM32, FreeRTOS, C/C++, PCB and enclosure design (Altium, KiCad, SolidWorks, Fusion 360), motors and drives, CAN/CAN FD, UART, I2C, SPI, BLE and 3D printing.
Automation and controls: PLC logic and integration, Siemens TIA Portal, HMI/SCADA (iFIX, PVI+), drives, Modbus, PROFINET, FAT/SAT, commissioning, GMP, ITPs, MDRs and AS/NZS compliance.
Industrial IT/OT and systems: MES, ERP integration, SCADA and historian platforms, OEE, downtime and traceability reporting, industrial networking, OT cyber security, backup and disaster recovery.
Software, AI, data and test: Python, MATLAB/Simulink, TypeScript, React, Rust (Tauri), SQL/SQLite, Git, CI/CD, OpenCV, scikit-learn, local language-model retrieval and evaluation, Linux, LoRaWAN, MQTT, InfluxDB, Grafana, CANoe, CANalyzer and calibrated data acquisition.

PROFESSIONAL EXPERIENCE

IT/OT and Systems Engineer
Oct 2026 - present

Farm Frites Australia, Dooen VIC

- Plant automation and control layers for a greenfield potato-processing plant through commissioning into 24-hour production: SCADA, PLC interfaces and historians, with FAT, SAT and validation alongside integrators and suppliers.
- MES and MES-ERP integration for orders, inventory and traceability; OT networks, servers, cyber security and backup with Corporate IT; documentation and user training.

Automation and Controls Engineer
Jan 2026 - Jun 2026

JAG Process Solutions

- Integrated PLC logic, HMI/SCADA, field devices, drives and manufacturing execution system (MES) data for pharmaceutical, biotech and food plants.
- Migrated validated iFIX content to PVI+ and verified functionality; supported factory and site acceptance testing (FAT/SAT), commissioning and GMP handover evidence.
- Isolated MiR autonomous mobile robot faults across control, network and production interfaces to identify the responsible system layer.

Product Development Test Engineer (Contract)
Oct 2025 - Jan 2026

Ford Motor Company via Invenio

- Tested vehicle-software integration and advanced driver assistance systems (ADAS) through feature-vehicle, breadboard and regression testing.
- Instrumented vehicles and analysed CAN/CAN FD data in CANoe and CANalyzer to isolate faults.

Technical Officer & Quality Assurance
Jul 2024 - Aug 2025

ABMARC

- Conducted emissions, EV/PHEV range and vehicle-system tests using calibrated instrumentation and data acquisition (DAQ).
- Maintained traceable test, safety and quality records for certification review.

Consultant Engineer, IoT and Projects Administrator Feb 2024 - Aug 2024
DuxTel

- Built ESP32 and LoRaWAN AU915 telemetry for agricultural equipment, capturing CAN and GPS data through ChirpStack, MQTT, InfluxDB and Grafana.
- Integrated custom PCBs, MikroTik connectivity and Linux services for provisioning, field trials and handover.

VOLTWYN: CLIENT PROJECTS (Jun 2026 - present)

Vehicle controller and display system | Electronics and firmware
Designed a four-layer ESP32-S3 vehicle controller, serial-adapter PCB, display firmware, browser configuration and vehicle-position sensing. Prepared fabrication files; assembled-system and field validation remain pending.

Pricing and inventory software | Full-stack software
Developed pricing and inventory software as sole engineer (React/TypeScript, Tauri/Rust, SQLite). Built operator-reviewed imports into a job-management platform with change, exception, rollback and audit reports.

MANUFACTURING AND QUALITY EXPERIENCE

Production Line Worker / Supervisor / Commissioning Support; Cellar Hand Aug 2022 - Feb 2024
IDL Australia

- Supervised production output, changeovers and handovers; maintained quality and traceability and supported canning-line commissioning to Sep 2023.
- From Sep 2023, supported cellar sanitation, sampling and production records.

Production Line Operator and Commissioning Support Sep 2021 - Dec 2021
Carbon Revolution

- Operated carbon-fibre wheel equipment and maintained quality records; supported equipment trials, setup and first-level fault recovery.

Undergraduate Quality Engineer Mar 2018 - Mar 2020
Thornton Engineering Australia

- Supported drawing review, ITPs, MDRs, material traceability and AS/NZS compliance in structural-steel fabrication.

SELECTED ENGINEERING PROJECTS Full portfolio: sv.sajeevanveeriah.workers.dev/work

Autonomous navigation rover | ROS 2 autonomy
Built a differential-drive platform with LiDAR and IMU. Integrated SLAM, EKF localisation and Nav2 in C++/Python; verified navigation and recovery in Gazebo and RViz. Autonomy validated in simulation.

Ataxia assessment device | Embedded mechatronics
Designed an ESP32 prototype, Altium PCB and enclosure with four Hall-effect channels sampled at 100 Hz and Bluetooth reporting. Tested accuracy, reversals, drift and temperature behaviour in MATLAB.

SPC-001 waterless solar-panel cleaner | Robotics
Developed mechanical CAD, electronics, supervisory control and coverage planning. Wrote an independent research paper on contact mechanics, traction and energy that distinguishes analysis from physical performance.

VeerAI | Local AI system
Built a locally deployed language-model system with document ingestion, retrieval, memory, tools and evaluation.

EDUCATION AND MEMBERSHIP

Bachelor of Mechatronics Engineering (Honours), Distinction 2025
Deakin University

Higher National Diploma in Mechatronics, Robotics and Automation Engineering, Distinction 2016
Cardiff Metropolitan University

Member, Engineers Australia | English, Tamil and Sinhala | Community leadership and engineering mentoring.
